

Design Phase						
Milestone 1 (16th June - 02nd July 2025) - Design Phase						
Persona	Module Name	Feature	Description	Impacted Features	Expected Behaviour	Designer Notes / Assumptions
Requirement Gathering						
Therapist	My Profile - schedule	Schedule	Revamp the current scheduling system to enhance its usability and functionality	Parent portal - scheduling an hour slot or half hour slots Therapist and admin: data refelection	1. Make more intuitive and user friendly design 2. Redesign Appointment slot selection 3. The scheduling system will be updated to support a time-based billing model rather than unit or consultation-based charges.	Need a bit more brainstorming session with designer and client to finalise the flow and make it hassle free Therapist and admin side flow should be simplifies as per Parent portal
Therapist/Parent	Registration and onboarding	Onboarding form	Deactivate some of the questions from onboarding screens	Patient/Parent - Onboarding screens	Just lesser number of questions. Keep only the conatc details of the registered user, option to skip the onboarding questions and directly take them to the home page where they can add the child and take assessments. Need clarity - which among father or Mother or both should have lesser details (Both)	Fairly simple just removing some input field detail
Patient/Parent and Therapist	Assessment	Assessment(question) and lesson plan	Anyone or both can assign and start assessment		The logic needs to be implemented. Currently its manual. Need to automate based on the score. Automatic linking the assessment and lesson plan based on scores. As soon as score comes the lesson plan should be added. This module is partially implemented already	Its a big implementation
Admin	Notifications		Notification History		(List of notifications)	We just need all events where we need to trigger predefined notification
Patient/Parent/ Admin	Registration & Login	Register as new user	View and manage the users who left registraion unfinished	Patient portal - Sign up Super admin and admin - capture required detail	As soon as a user enter the required details an API should be called to save the details even before clicking the "create account" button Don't delete the user details from admin panel. The status of the account should be visible. Active/ Inactive/ Deleted. All accounts should fall to any one of these categories	

Admin	My profile - Subscription	Subscription plan	Edit subscriptions	Ptient/parent subscription Super admin and admin view - subscriptions	1. Edit the subscription details, like price and set a date to be effective for all users through playstore 2. Customised feature assignment to a particular subscription model through admin 3. Edit subscription price without removing existing users of this plan 4. Subscription not returning to free plan upon completion of time	2. Its difficult o implement, we can control the features but we can't control the user impact as this is being controlled by app store and play store. Maintaing user level subscription details will be very complex to implement.
Admin	Parent/ Admin	Transaction history	Incorporate an invoice format with unique invoice number with other details capture	Patient/parent - My profile -Transaction history Super admin and admin also needs design changes	Make invoice uniform across the platform with invoice number generated as per a format instead of txn number Design is already there just few tweaks needed Remove few details like 10% convenience charge Charging 30% as conv fee would be too high? want this to be controlled through admin.	
			Ability to download the CSV File	Transaction history	Download CSV with all transactions (New)	

Development Phase

Milestone 1 (07th July - 18th July 2025) - Development Phase						
Persona	Module Name	Feature	Description	Impacted Features	Expected Behaviour	Dev Notes / Assumptions
Therapist	My Profile - schedule	Schedule	Revamp the current scheduling system to enhance its usability and functionality	Parent portal - scheduling an hour slot or half hour slots Therapist and admin: data refelection	1. Make more intuitive and user friendly design 2. Redesign Appointment slot selection 3. charges will be 15 min basis, but shouldn't be any limitation in booking slots	The flow of the scheduling will not change entirely, but rather UX changes with same workflow.
Therapist/Parent	Registration and onboarding	Onboarding form	Deactivate some of the questions from onboarding screens	Patient/Parent - Onboarding screens	Just lesser number of questions. Keep only the conatc details of the registered user, option to skip the onboarding questions and directly take them to the home page where they can add the child and take assessments. Need clarity - which among father or Mother or both should have lesser details (Both)	Validations of user details will be removed from both frontend and backend.

Patient/Parent and Therapist	Assessment	Assessment(question) and lesson plan	Anyone or both can assign and start assessment		<p>The logic needs to be implemented. Currently its manual. Need to automate based on the score.</p> <p>Automatic linking the assessment and lesson plan based on scores. As soon as score comes the lesson plan should be added. This module is partially implemented already</p>	Existing flows will remain same with the addition of automatic linking of assessments through the backend as per the score.
Patient/Parent	Notifications		Notification for next steps		<p>1. What to do next for 1st timer user</p> <p>2. Upload the doc - format and error handling</p> <p>3. Parent after logged in, post subscription steps</p> <p>3. Few other similar events</p>	These will be non interactive notifications without deep links.
Patient/Parent/ Admin	Registration & Login	Register as new user	View and manage the users who left registraion unfinished	<p>Patient portal - Sign up</p> <p>Super admin and admin - capture required detail</p>	<p>As soon as a user enter the required details an API should be called to save the details even before clicking the "create account" button</p> <p>Don't delete the user details from admin panel. The status of the account should be visible. Active/ Inactive/ Deleted. All accounts should fall to any one of these categories</p>	
Admin	My profile - Subscription	Subscription plan	Edit subscriptions	<p>Ptient/parent subscription</p> <p>Super admin and admin view - subscriptions</p>	<p>1. Edit the subscription details, like price and set a date to be effective for all users through playstore</p> <p>2. Customised feature assignment to a particular subscription model through admin</p> <p>3. Edit subscription price without removing existing users of this plan (through playstore)</p> <p>4. Subscription not returning to free plan upon completion of time</p>	

Milestone 2 (21st July - 29th July 2025) - Development Phase						
Persona	Module Name	Feature	Description	Impacted Features	Expected Behaviour	Dev Notes / Assumptions
			<p>Incorporate an invoice format with unique invoice number with other details capture</p>	<p>Patient/parent - My profile -Transaction history</p> <p>Super admin and admin also needs design changes</p>	<p>Make invoice uniform across the platform with invoice number generated as per a format instead of txn number</p> <p>Design is already there just few tweaks needed</p> <p>Remove few details like 10% convenience charge</p> <p>Charging 30% as conv fee would be too high? want this to be controlled through admin.</p>
